

Vibro-FS

RUBBER SUPPORT for WOODEN FLOORS

Vibro-FS, is a specially designed homogeneous elastomeric support system that has been developed to reduce the impact noise of wooden floors.

Impact noise refers to sound produced when a short duration impulse, acts directly on a structure.

Vibro-FS pads, are useful for the impact noise reduction (for example footsteps) of upcoming noise from upstairs to the levels below.

The floor pads can also prevent the creation of thermal and acoustic bridges.

Also, they improve the insulation of lightweight partitions.

Inside the specially modulated receptor  a wooden batten or metal profile of floating wooden floors can be installed and fixed on the lateral flaps with bolts.

Vibro-FS can be fixed on the floor with expansion bolts or inox nails. In every fix point a metal washer must be used (included). The floor should not lay against the wall, and for that reason the specially designed elastic profile **VIBRO-band** should be applied between the floor and the wall around the room.

QUANTITY

6 - 8 items per m²

MAXIMUM LOAD

80 Kg per mounting point

Design and Production according to Quality Management System ISO 9001.2008 & Environmental Management System ISO 14001.2004
